Lab2-Development

Lab 2: (1-2 Days)

Create your first DNN Module

Create a DNN Module

1. Open Visual Studio
2. Create a New project using Dot Net Nuke as template
3. Add simple code (Like Hello World - to render in a HTML)
4. Implement something simple for Settings and Edit components
5. Build the solution
6. Install the module in your local environment

Create a DNN Module Using DNN Interface

1. Login into the portal
2. Create a new module using DNN Interface
3. Add simple code to render

Create a HTML Pro Module Using DNN Interface

1. Login into the portal
2. Create a new HTML Pro module using DNN Interface
3. Add simple code to render

Questions

1. Which are the differences between those 3 modules?
2. Pros and Cons of each one
3. Did you have any problem during the creating/installation of the modules? Which one? How much time took to solve it?

4. What is the purpose of Settings and Edit components? Difference against View.
